In Italia leader nel settore per lo scarico dei fumi di stufe a legna.

SAVE è un'azienda italiana che opera sin dal 1967 nel campo della fumisteria, dei canali da fumo e delle canne fumarie e vanta in Italia una posizione di assoluta leadership sia per quanto riguarda la quota di mercato che per la qualità delle sue produzioni. Negli ultimi anni l'azienda è approdata con successo anche sui mercati esteri e punta decisamente a conquistare in Europa quella posizione che, grazie alla grande specializzazione nella produzione di tubi per lo scarico dei fumi di stufe a legna e a pellet, ha saputo raggiungere in Italia.

The leader in Italy in the flue sector for wood-burning stoves.

SAVE is an Italian company that has been in operation since 1967 in the field of drain smoke tubes and flue pipes. In Italy the company has the leadership of market quotations and also for his high products quality. In previous years the company also had successfully contacts with foreign markets and it is going to have in Europe the same success and position that has in Italy for his high specialisation.

SAVE DA SEMPRE FORNISCE PRODOTTI SICURI E CONFORMI ALLE NORME, INFATTI ESSI HANNO SUPERATO I SEVERI TEST PREVISTI DALLA EN1856-2 PRESSO LABORATORI QUALIFICATI, DIMOSTRANDO COSÌ IL LORO ELEVATO STANDARD QUALITATIVO.

Informazioni tecniche e normative

Camini, canne fumarie e canali da fumo devono essere marcati CE in base alla norma europea EN 1856-2. La norma prevede che essi siano accompagnati da una designazione che informa sulle caratteristiche del prodotto e sulle sue prestazioni, mettendo quindi l'installatore in grado di scegliere il giusto prodotto a seconda dell'utilizzo.

Test V2. Ottime performances dei canali da fumo vetroporcellanati sottoposti al test V2 sulla resistenza alla corrosione. Tale test rende il prodotto idoneo ad essere installato su tutti i tipi di apparecchi, a combustibile solido (legna, pellet e carbone), liquido e gassoso. La copertura vetroporcellanata conferisce una eccezionale resistenza alla corrosione da parte delle condense della combustione.

Dichiarazione di Prestazioni e istruzioni per l'installazione.

Nel sito www.savefumisteria.it sono disponibili la Dichiarazione di Prestazioni con tutti i riferimenti ai tests eseguiti e le istruzioni di montaggio e manutenzione a garanzia di assoluta sicurezza nell'utilizzo.

SAVE HAS ALWAYS PROVIDED SAFE PRODUCTS IN COMPLIANCE WITH STANDARDS AND PASSED THE STRICT TESTS SPECIFIED IN EN1856-2 AT QUALIFIED TEST LABORATORIES IN DEMONSTRATION OF THEIR HIGH QUALITY STANDARDS.

Technical informations and standard

Chimneys, flues and flue pipes must bear CE marking as required by the European standard EN 1856-2, which specifies that all must bear designation that lists the characteristics and performance of the product and enables installers to choose the right product for the purpose.

V2 Test. Excellent performance by vitreous enameled flue pipes subjected to V2 corrosion resistance test qualifies the product for installation in all types of solid (wood, pellet and coal), liquid and gas fuel stoves. Vitreous enamel coating ensures exceptional resistance against corrosion by combustion condensate.

Declaration of Performance and Installation Instructions.

The www.savefumisteria.it website provides Declaration of Performance with reference to all the tests performed and Installation and Maintenance Instructions to ensure the greatest safety during use.

PELLET

linea pellet **LIGHT**

Leggeri ed economici mantengono tutte le caratteristiche e le prestazioni della linea pellet.

Lightweight and economical, they continue to offer all the characteristics and performance of the pellet line.

PELLET LIGHT

Tubi per stufe a pellet porcellanati in nero opaco
 Matt black vitreous enamelled pipes for pellet stoves
 Tubes émaillés en noir mat pour poêles à pellets (granulés de bois)
 Mattschwarz emaillierte Rohre für Pelletöfen

Nero opaco
 Matt black
 Noir mat
 Mattschwarz

Questi tubi sono più leggeri ed economici rispetto alla linea Pellet, pur mantenendo tutte le caratteristiche normative e prestazionali. Sono perfettamente compatibili sia dal punto di vista tecnico per imbrocchi e dimensioni, sia dal punto di vista estetico per l'uguale finitura in smalto porcellanato.

E' una linea di canali da fumo appositamente studiata per le stufe a pellet che, avendo un ventilatore nel circuito di combustione, richiedono l'utilizzo di guarnizioni di tenuta.

Le guarnizioni sono, a scelta, di 3 tipi:

- IN SILICONE NERO
 Classe di tenuta: P1 - Resistenza alla temperatura: 200°C
- IN VITON VERDE
 Classe di tenuta: P1 - Resistenza alla temperatura: 250°C
- IN FIBRA DI VETRO
 Classe di tenuta: N1 - Resistenza alla temperatura: 550°C

These pipes are lighter and less expensive than the Pellet line, while maintaining all the characteristics and performance standards. They are fully compatible from both the technical point of view - thanks to the same connections and dimensions - and the aesthetical point of view, thanks to the same enamel coating.

This is a range of flue pipes specially designed for pellet stoves which require the use of gaskets, as they have a fan in the combustion circuit.

There is a choice of 3 types of gaskets

- BLACK SILICON GASKET
 Pressure class: P1 - Temperature resistance: 200°C
- GREEN VITON GASKET
 Pressure class: P1 - Temperature resistance: 250°C
- FIBERGLASS GASKET
 Pressure class: N1 - Temperature resistance: 550°C

Le guarnizioni non sono comprese • The gaskets are not included
Les joints ne sont pas compris • Die Dichtungen sind nicht enthalten

Costruiti in acciaio al carbonio saldati a laser per ottenere saldature perfette, successivamente ricoperti internamente ed esternamente con smalto vetroporcellanato cotto alla temperatura di 850°C per conferire eccezionali qualità di resistenza alla corrosione delle condense di combustione.

Resistono perfettamente anche a situazioni estreme come il fuoco di fuliggine (incendio che avviene dentro il tubo) senza rovinarsi o alterarsi; naturalmente nel caso in cui si verifichi il fuoco di fuliggine è necessario controllare che le guarnizioni non si siano deteriorate ed eventualmente sostituirle.

La Dichiarazione di Prestazioni (DoP) n°5 Pellet Light è disponibile sul sito www.savefumisteria.it alla pagina "download", con tutti i riferimenti ai test eseguiti e le istruzioni di montaggio e manutenzione a garanzia di assoluta sicurezza nell'utilizzo.

Laser-welding ensures these carbon steel pipes perfect welding. Subsequent internal/external vitreous enamel coating baked to 850°C provides exceptional resistance against corrosion by combustion condensate.

They are perfectly resistant even to extreme situations such as soot-fire (a fire that occurs inside the pipe) without being damaged or modified; obviously, if a soot-fire should occur, the gaskets must be checked for signs of deterioration and changed if necessary.

Tutti gli Accessori PELLET SAVE sono appositamente studiati per essere perfettamente adattabili alle linee Pellet e Pellet Light.

All the PELLET SAVE accessories have been specifically designed to fit the Pellet and Pellet Light.

Questa linea è appositamente studiata per le stufe a pellet che, avendo un ventilatore nel circuito di combustione, richiedono l'utilizzo di guarnizioni di tenuta.

This is a range of flue pipes specially designed for pellet stoves which require the use of gaskets, as they have a fan in the combustion circuit.

Le guarnizioni sono, a scelta, di 3 tipi:

There is a choice of 3 types of gaskets

- IN SILICONE NERO
 Classe di tenuta: P1 - Resistenza alla temperatura: 200°C
- IN VITON VERDE
 Classe di tenuta: P1 - Resistenza alla temperatura: 250°C
- IN FIBRA DI VETRO
 Classe di tenuta: N1 - Resistenza alla temperatura: 550°C

- BLACK SILICON GASKET
 Pressure class: P1 - Temperature resistance: 200°C
- GREEN VITON GASKET
 Pressure class: P1 - Temperature resistance: 250°C
- FIBERGLASS GASKET
 Pressure class: N1 - Temperature resistance: 550°C

Le guarnizioni non sono comprese • The gaskets are not included
Les joints ne sont pas compris • Die Dichtungen sind nicht enthalten

Rappresentano il massimo qualitativo della produzione SAVE Spa: tubi in acciaio al carbonio saldati a laser per ottenere saldature perfette, vengono successivamente ricoperti internamente ed esternamente con smalto vetroporcellanato cotto a temperatura di 850°C per conferire eccezionali qualità di resistenza alla corrosione delle condense di combustione.

I risultati del test V2 previsto dalla norma 1856-2 sulla resistenza alla corrosione, hanno dimostrato che i canali da fumo Plus 1.2mm e Plus Light hanno una durata decisamente superiore ai normali tubi verniciati di sp. 2mm non vetrificati internamente.

Resistono perfettamente anche a situazioni estreme come il fuoco di fuliggine (incendio che avviene dentro il tubo) senza rovinarsi o alterarsi.

Per evitare la fuoriuscita di condensa è necessario che vengano montati con l'imbocco rivolto verso il basso (vedi disegno). Per fare questo può essere necessario usare come partenza il raccordo F/F anticondensa.

La Dichiarazione di Prestazioni (DoP) n°2 - Plus 1,2mm è disponibile sul sito www.savefumisteria.it alla pagina "download", con tutti i riferimenti ai test eseguiti e le istruzioni di montaggio e manutenzione a garanzia di assoluta sicurezza nell'utilizzo.

Representing the highest level of SAVE Spa quality, laser-welding ensures these carbon steel pipes perfect welding. Subsequent internal/external vitreous enamel coating baked to 850°C provides exceptional resistance against corrosion by combustion condensate.

V2 test results specified by corrosion resistance Standard 1856-2 show that Plus 1.2 mm and Plus Light flue pipes have a significantly longer duration than normally painted 2 mm thick pipes that have not received internal vitreous enamel coating.

They are perfectly resistant even to extreme situations such as soot-fire (a fire that occurs inside the pipe) without being damaged or modified.

In order to prevent the leakage of condensate, they must be fitted with the inlet facing downwards (see drawing). To do this, it may be necessary to use an F/F anti-condensate fitting to start with.

The Declaration of Performance (DoP) n°2 - Plus 1,2mm is available at www.savefumisteria.it in the download area, with reference to all the tests performed and Installation and Maintenance Instructions to ensure the greatest safety during use.

+ WOOD

linea plus **LIGHT**

Leggeri ed economici mantengono tutte le caratteristiche e le prestazioni della linea plus.

Lightweight and economical, they continue to offer all the characteristics and performance of the plus line.

PLUS LIGHT

Tubi per stufe a legna porcellanati in nero opaco
 Plus matt black vitreous enamelled pipes
 Tubes émaillés Plus en noir mat
 Mattschwarz emaillierte Plus-Rohre

Questi tubi sono più leggeri ed economici rispetto alla linea Plus 1,2mm, pur mantenendo tutte le caratteristiche normative e prestazionali. Sono perfettamente compatibili sia dal punto di vista tecnico per imbrocchi e dimensioni, sia dal punto di vista estetico per l'uguale finitura in smalto porcellanato. Su questi tubi si possono utilizzare gomiti e T della linea Plus 1,2mm oppure gomiti della linea Classic.

Rappresentano il massimo qualitativo della produzione SAVE Spa: tubi in acciaio al carbonio saldati a laser per ottenere saldature perfette, vengono successivamente ricoperti internamente ed esternamente con smalto vetroporcellanato cotto a temperatura di 850°C per conferire eccezionali qualità di resistenza alla corrosione delle condense di combustione.

I risultati del test V2 previsto dalla norma 1856-2 sulla resistenza alla corrosione, hanno dimostrato che i canali da fumo Plus 1.2mm e Plus Light hanno una durata decisamente superiore ai normali tubi verniciati di sp. 2mm non vetrificati internamente.

Resistono perfettamente anche a situazioni estreme come il fuoco di fuliggine (incendio che avviene dentro il tubo) senza rovinarsi o alterarsi.

Per evitare la fuoriuscita di condensa è necessario che vengano montati con l'imbocco rivolto verso il basso (vedi disegno). Per fare questo può essere necessario usare come partenza il raccordo F/F anticondensa.

La Dichiarazione di Prestazioni (DoP) n°6 Plus Light è disponibili sul sito www.savefumisteria.it alla pagina "download", con tutti i riferimenti ai test eseguiti e le istruzioni di montaggio e manutenzione a garanzia di assoluta sicurezza nell'utilizzo.

These pipes are lighter and less expensive than the Plus 1.2mm line, while maintaining all the characteristics and performance standards. They are fully compatible from both the technical point of view - thanks to the same connections and dimensions - and the aesthetical point of view, thanks to the same enamel coating. These pipes can be fitted with Plus 1.2 mm line elbows and tees or Classic line elbows.

Representing the highest level of SAVE Spa quality, laser-welding ensures these carbon steel pipes perfect welding. Subsequent internal/external vitreous enamel coating baked to 850°C provides exceptional resistance against corrosion by combustion condensate.

V2 test results specified by corrosion resistance Standard 1856-2 show that Plus 1.2 mm and Plus Light flue pipes have a significantly longer duration than normally painted 2 mm thick pipes that have not received internal vitreous enamel coating.

They are perfectly resistant even to extreme situations such as soot-fire (a fire that occurs inside the pipe) without being damaged or modified.

In order to prevent the leakage of condensate, they must be fitted with the inlet facing downwards (see drawing). To do this, it may be necessary to use an F/F anti-condensate fitting to start with.

The Declaration of Performance (DoP) n°6 Plus Light is available at www.savefumisteria.it in the download area, with reference to all the tests performed and Installation and Maintenance Instructions to ensure the greatest safety during use.

2mm VERNICIATO

Tubi in acciaio normale 2mm verniciato in grigio
 Grey painted 2 mm pipes
 Tubes 2 mm laqués gris
 2-mm- Rohre, grau lackiert

Di gradevolissimo aspetto estetico, sono costruiti con lamiera di acciaio di spessore 2mm ed esternamente rivestiti con SENOTHERM®, una speciale vernice per alte temperature che resiste fino a 500°C.

Pleasing to the eye, these pipes are made of sheet steel 2 mm thick and are coated on the outside with SENOTHERM®, a special coating for high temperatures that resists up to 500°C.

Senotherm®
 marchio registrato Weilburger Coatings GmbH

IMPORTANTE: la condensa è un fenomeno abbastanza frequente sia per il tipo di stufe su cui si installano (con fumi a basse temperature), sia per l'inerzia termica dei tubi stessi dovuta al loro elevato spessore. Questi canali da fumo sono classificati W, quindi possono essere installati anche in presenza di condensa purchè vengano montati con l'imbocco rivolto verso il basso (vedi disegno). Per fare questo può essere necessario usare come partenza il raccordo anticondensa oppure l'inserito anticondensa.

La Dichiarazione di Prestazioni n°4 - 2mm è disponibile sul sito www.savefumisteria.it alla pagina "download", con tutti i riferimenti ai test eseguiti e le istruzioni di montaggio e manutenzione a garanzia di assoluta sicurezza nell'utilizzo.

IMPORTANT: condensate is quite a common occurrence due both to the type of stove on which they are installed (with low temperature smoke) and for the thermal inertia of the pipes themselves caused by their considerable thickness. These flue pipes are classified as W, and, consequently, they can be installed even in the presence of condensate as long as they are fitted with the inlet facing downwards (see drawing). To do this, it may be necessary to use an anti-condensate fitting or an anti-condensate insert to start with.

The Declaration of Performance n°4 - 2mm is available at www.savefumisteria.it in the download area, with reference to all the tests performed and Installation and Maintenance Instructions to ensure the greatest safety during use.

I tubi smaltati SAVE sono prodotti con lamiera di acciaio rivestita con smalto porcellanato tramite un procedimento che prevede la cottura del pezzo a ben 830°C.

Lo smalto porcellanato rende questo tubo preferibile ad ogni altro per alcune caratteristiche:

- resistenza alle più alte temperature di esercizio: T600, la classe più alta secondo la EN 1856-2
- resistenza allo sbalzo termico
- resistenza alla corrosione da condensa certificata dal superamento del test V2 che li rende idonei all'utilizzo con qualsiasi tipo di combustibile: solido, liquido e gassoso
- resistenza all'abrasione e agli agenti chimici: sono lavabili con qualsiasi solvente o prodotto per la pulizia.
- tenuta ai gas della combustione (tiraggio naturale)
- qualità estetica: i colori non si alterano con l'uso o con le alte temperature

CAMPO DI APPLICAZIONE

**APPARECCHI E STUFE A: LEGNA - CARBONE - GAS
GASOLIO - KEROSENE**

La Dichiarazione di Prestazioni (Dop) n°1 - Classic è disponibile sul sito www.savefumisteria.it alla pagina "download", con tutti i riferimenti ai test eseguiti e le istruzioni di montaggio e manutenzione a garanzia di assoluta sicurezza nell'utilizzo.

The SAVE vitreous enamelled pipes are made of sheet steel coated with vitreous enamel and baked at 830°C.

The vitreous enamel coating makes this pipe better than any other pipe thanks to some of its features:

- resistance to the highest working temperatures: T600, the highest class according to EN 1856-2
- resistance to any changes in temperature
- resistance to condensate corrosion certified by the outcome of the V2 test for qualification for use with any type of solid, liquid or gas fuel.
- resistance to abrasion and chemical agents; they can be cleaned with any solvent or cleaning product
- combustion gas-tight (natural draught)
- aesthetic quality: colours do not alter with use or as a result of high temperatures

FIELD OF APPLICATION

**WOOD-BURNING – COAL – GAS – GAS OIL
KEROSENE APPLIANCES AND STOVES**

The Declaration of Performance (DoP) n°1 - Classic is available at www.savefumisteria.it in the download area, with reference to all the tests performed and Installation and Maintenance Instructions to ensure the greatest safety during use.

Alluminio naturale
Natural aluminium
Aluminium naturel
Aluminium natur

E' un tubo di grande praticità e facilità d'installazione, elimina i gomiti e si adatta alle varie lunghezze che l'installazione richiede: un pezzo di 85 cm si può allungare fino a 3 metri!

CAMPO DI APPLICAZIONE CONDOTTE D'ARIA - ASPIRAZIONI - CAPPE

TEMPERATURA MASSIMA di esercizio: 300°C per il tubo in alluminio naturale, 200°C per il tubo in alluminio colorato (in questo caso è la vernice che si deteriora).

Il tubo flessibile in alluminio non si può usare su stufe a legna e carbone perchè i loro fumi normalmente raggiungono temperature superiori ai 300°C.

This pipe is extremely practical to use and easy to install. It eliminates the need for elbows and adapts to a variety of lengths to suit specific installation requirements: an 85 cm piece can extend up to 3 metres!

FIELD OF APPLICATION AIR DUCTS – SUCTION SYSTEMS - HOODS

MAXIMUM OPERATING TEMPERATURE: 300°C for the natural aluminium pipe, 200°C for the painted aluminium pipe (in this case it is the paint that deteriorates). The flexible aluminium pipe cannot be used on wood-burning and coal stoves as the temperature of the smoke produced normally exceeds 300°C.
